Walter Sullivan

Walter Sullivan guided the development of groundbreaking tools that empowered a generation of software developers and shaped the future of Windows technology. He started his career at Microsoft in 1990 within the Microsoft C/C++ group, Walter was a key contributor to the success of one of Microsoft's important programming languages. His work not only supported developers but also strengthened Microsoft's role as a leader in commercial software. In his later years at Microsoft, Walter transitioned to a senior program management role with the Windows Automotive initiative, where he focused on embedding Windows into vehicles to elevate the in-car experience. Walter's vision, technical expertise, and pioneering spirit drove advancements that impacted both developers and drivers alike.
